Banking Data Engineering Platform Report

1. Project Overview

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

2. Objectives

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

3. Technology Stack

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

4. Folder Structure

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

5. Architecture

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

6. Medallion Architecture

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

7. Reference Data

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

8. Ingestion

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

9. Validation

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

10. Bronze to Silver

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

11. Fraud Detection

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

12. Gold Layer

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

13. SQL Analytics

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

14. Dashboard

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

15. Master Pipeline

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

16. Audit Logging

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

17. Sample Data

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

18. Future Enhancements

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

19. GitHub Structure

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.

20. Conclusion

This section describes the design, implementation, workflow, and best practices used in the Banking Data Engineering Platform built on Databricks Free Edition with Delta Lake, PySpark, and Medallion Architecture.
